

SP-949

Remote Video Surveillance

Covert remote video surveillance with PTZ control over high-speed cellular Network.

Description

For short term situations, 8 hours, (longer with optional battery pack) where live surveillance cannot be utilized, the SP-949 can be mounted inside a vehicle with tinted windows and left unattended. The unit can be controlled remotely from any location via a laptop or desktop computer.

Remote mobile covert surveillance can now be realized with the advent of the SP-949. Since the SP-949 uses the 3G high-speed cellular network, there is no waiting for the phone or cable company to connect your covert camera.

Quick deployment is assured with the SP-949 as it is packaged in a rugged field case and no tools are required. Mounted in a vehicle with limo style tinting the SP-949 is virtually undetectable by anyone approaching the vehicle.

Remote PTZ control and video transmission from the camera are sent via the 3G high-speed cellular network modem link between the host computer and the SP-949. All camera parameters can be adjusted to compensate for various conditions such as poor lighting.

Features

- Quick deployment of cameras over 3G high-speed cellular connections in the field.
- 24 Hour continuous operation with included battery.
- Quick connect cables with no tools required for ease of use.
- Vehicle mounting bracket for covert operation behind tinted glass windows.
- Field case for portability and safe storage while transporting.
- Variety of IP cameras available to meet specific customer requirements: (*Axis, JVC, Panasonic and Sony*).
- Optional **Field Video Recorder** with system to record video on site in full resolution and quality for evidence collection.
